For the standard solar module types listed above, HYPERION warrants its PV Modules (MODULES) starting from the date of product installation or three months after the delivery (Inco-terms 2020) of the products to the Buyer (WARRANTY START DATE), whichever date is earlier.

1. LIMITED PRODUCT WARRANTY – TWELVE YEARS REPAIR, REPLACEMENT OR REFUND REMEDY

HYPERION warrants its modules, including factory-assembled DC connectors and cables, if any, to be free from defect in materials and workmanship, as per the mechanical and electrical characteristics of the product's datasheet, under normal application, proper installation as per HYPERION installation guide, use and service conditions. If modules fail to conform to this warranty, during the period of One Hundred and Forty-Four (144) months for single glass PERC PV modules and double glass PERC PV modules, from the WARRANTY START DATE, HYPERION will, at its option, either repair or replace the product, or refund the current list price at the time of warranty claim resolution of comparable HYPERION MODULES. The repair or replacement or refund remedy shall be the sole and exclusive remedy provided under the "Limited Product Warranty" and shall not be extended beyond the period set forth herein. The replacement will be Grade A- or above modules. This "Limited Product Warranty" does not warrant a specific power output, which shall be exclusively covered under clause 2 hereinafter ("Limited Peak Power Warranty").

2. LIMITED PEAK POWER WARRANTY - LIMITED REMEDY

HYPERION warrants that for a period of twenty-five years for single glass PERC PV module products and thirty years for double glass PERC PV modules, the modules will maintain a level of performance as set forth below:

For single glass PERC PV modules, the actual average power output of the modules will be no less than 98% of the

nominal power output in the first year; thereafter, 0.55% maximum decrease per year, ending with at least 84.8% of the nominal power output in the 25th year after the WARRANTY START DATE.

For double glass PERC PV modules, the actual average power output of the modules will be no less than 98% of the nominal power output in the first year; thereafter, 0.45% maximum decrease per year, ending with at least 84.95% of the nominal power output in the 30th year after the WARRANTY START DATE.

HYPERION warrants each module against defects in materials and workmanship that result in the failure of the modules to produce the warranted percentage specified above of the nominal power output for the module set forth in HYPERION product datasheet. If HYPERION determines in its discretion that any module is not providing the warranted percentage of the nominal power output because of defects in materials or workmanship, HYPERION will at its option either (1) replace such loss in power by either, (a) providing additional modules to the CUSTOMER to make up for such loss in power, or (b) replacing the defective module(s) or part by a functional equivalent; or (2) refund the percentage of the module's price, representing the percentage of the power that is less than the warranted percentage of the nominal power according to the current list price, at the time of warranty claim resolution, of comparable HYPERION MODULES.

The remedies set forth in this clause 2 shall be the sole and exclusive remedies provided under the "Limited Peak Power Warranty".

Nominal Power Output in product datasheet is the power in Watt Peak that a Photovoltaic Solar Modules generates in its Maximum Power Point under Standard Testing Conditions (STC). STC are as follows: (a) light spectrum of AM 1.5, (b) an irradiation of 1000W per square meter and (c) a cell temperature of 25 degrees centigrade at direct angle irradiation. The measurements are carried out in accordance with IEC 61215, tested at the connectors or junction box terminals, per calibration and testing standards of HYPERION valid at the date of manufacture of the PV modules.
